

YOUNG HYDROLOGIC SOCIETY

a network for young hydrologists

Is hydrology a **fragmented science**, lacking scientific cohesion? Where is the voice of the **new generation**? Young minds bring fresh ideas and visions. Why not **involve** them more in enhancing the science of hydrology?

Young Hydrologic Society is an initiative aiming to set up a network for young hydrologists. Unifying young scientist and stimulating their active participation can be benifitial for many reasons, e.g. :

- Stimulating bottom-up research initiatives, initiated by PhD/MSc peers,
- Improving PhD/MSc research opportunities and collaboration
- Improved awareness among young scientists about current and future research topics

We will organize a meeting during the **EGU General Assemby 2013**, in Vienna. This meeting will be an interactive session where we will discuss the possible contribution of this network, what its goals should be and how this should be organized in the most effective fashion.

We cannot do this alone, so during the coming months we will **get together a team of students and young scientists** to further shape the initiative. Therefore we invite you to participate in the Young Hydrologic Society team. If you are interested in participating or you have suggestions or comments, please send us an **email** or visit our **website**.

Feel free to spread this word to your fellow students.

We are looking forward to welcome you all on the team!
